By default setting, the AS203 doesn't notice the user in any form when it's a good data read for a barcode, since it doesn't have a buzzer, nor a vibrator; however we can enable the barcode scanner's LED light to flash twice as a notification of a successful read.

Good Read Flash :

Applied to F/W: SM3-d-1.23.KBM

Good Read Flash OFF (Default)

.A104$

Good Read Flash ON

.A103$

Steps:

Scan <.A103$> or <.A104$>
